

ProCut Contour and Servo

Pinch Roller Setup

1-1

The pinch rollers will tighten with clockwise rotation of the brass thumb nuts. Rollers can be adjusted for different thicknesses of material.

1-2

- ◆ The ProCut Contour and Servo utilize knurled rollers for improved tracking and reduced slippage.
- ◆ The rollers are adjustable to conform to different material thicknesses.
- ◆ Rollers should be adjusted to achieve uniform pressure.
- ◆ If rollers are adjusted with too much pressure then the knurl from the rollers may impress an image into the top side of the vinyl. To avoid this condition, decrease the force on the rollers by adjusting the thumb nuts counter clockwise (loosen).
- ◆ If rollers are adjusted with not enough pressure, material may slip between pinch roller (top) and knurled roller (bottom). If this occurs, increase the force on the rollers by adjusting the thumb nuts clockwise (tighten).

1-3

Note that the rollers must line up with the white roller indicator marks on the cutter. Not all positions will be used.

1-4

Note proper location of pinch roller. It is best to align pinch rollers prior to placing material in vinyl cutter.

The End
